

Keep protects the inside

Keep Safe System gives people and environments increased protection against intrusion, blasting, fire and shelling.

We were inspired by the car industry and their long history of using damping elements to increase safety and save lives. Based on the same principle, Keep developed a world-unique solution that protects the inside by preventing the window and frame from collapsing and being pushed into the property. With Keep's fastening system, it is possible to use thinner glass and manufacture larger sections with maintained security up to the highest security level. It means both design gains and cost benefits for example architects, property owners, builders and construction companies.

Main areas of use

- Steel sections for safe and secure facades, windows and doors
- Glass facades

When the inside matters

Our system is suitable where the inside is important to protect:

- airports
- alarm centres
- banks and post offices
- department stores and shops
- embassies
- government buildings
- police stations
- subways
- private individuals at high risk

Advantages

- Will revolutionize the market for steel frame doors and windows
- Ability to use thinner glass and maintaining safety up to the highest security level
- Ability to combine fire, blast, bullet and attack protection in one system
- Withstands significantly higher stresses than similar products
- Higher security – lower cost
- Substantial esthetic design possibilities
- Patent in Sweden, worldwide patent pending
- Certified and tested

Tests and certifications

Tests and calculations show that we can handle blasting, shelling, attack, fire and smash and grab in the same system and at a higher level of security. For example, the system manages explosive class level 3, EXR3, with glass classified for level 1, EXR1 and the highest level EXR5 with glass classified for level 3, EXR3.

Keep support

Keep offers a total solution that includes everything from consulting and pre-engineering to manufacturing. Based on the customers' needs, Keep delivers steel sections with glass, assembly and installation and after-market support.
